Subject: MicroCrash rain on the planet

Good day,

Why would you support a company that produces bug filled software that charges you for a defective product. Here is our new OS for \$199.00 Rev.. Now remember to download all of the patches. Oh by the way here is rev. 2 that fixes all of the bugs we left in Rev.. for another \$199.00.

I refuse to buy any products manufactured by Micro Crash!!!! At least the developers of Linux are listening to what the people want!!! A solid OS and not taking use for every penny they can get.

Every single time Micro crash releases a piece of software it is the same thing over and over!!!! Nothing but a milking of we the people. But of course that's not right anymore!!! We the government, for the government, by the government!!!!

The news media talks about how United we Stand after the Trade Center attacks!!! More like United we stand screwing each other out of a dollar!!!! Put a stop to this company shoving their defective software down our throats!!!! We the people, what happened to our rights to having a choice!!!!

Thank you for nothing!!!

Wes Youmans
